

THE EDINBURGH MATHEMATICAL SOCIETY

The Edinburgh Mathematical Society was instituted in 1883 for ‘the promotion and extension of Mathematical Science, Pure and Applied’.

Members may subscribe to the *Proceedings* at a reduced rate. Further information about membership can be obtained from the Secretary.

The Society’s address is The Secretary, The Edinburgh Mathematical Society, James Clerk Maxwell Building, The King’s Buildings, Edinburgh EH9 3JZ, UK (edmathsoc@ed.ac.uk).

Submission of papers

Papers to be considered for publication should be submitted by email (preferably) to pems@icms.org.uk (in the form of a single pdf, postscript or $\text{\TeX}$ / $\text{\LaTeX}$ attachment). Alternatively, papers may be submitted by post to PEMS Editorial Office, International Centre for Mathematical Sciences, The Bayes Centre, 47 Potterrow, Edinburgh EH8 9BT, UK.

Each manuscript should contain a short abstract of no more than 200 words and also a primary classification number from the American Mathematical Society’s 2010 Mathematics Subject Classification Scheme. The style and arrangement of the paper should conform to current practice in the *Proceedings*.

Authors should include in their covering note a suggestion of an appropriate subject editor from the list of board members on the inside front cover.

Authors are encouraged to use $\text{\TeX}$ or $\text{\LaTeX}$ to prepare their papers. $\text{\LaTeX}$ is especially recommended, and a class file is available from <http://icms.org.uk/activities/pems> although it is not necessary to use this.

Once an article has reached its final form and is accepted for publication, authors will be asked to supply a $\text{\TeX}$ file for the paper (if available). This should be a single file, with any relevant macros included in the preamble. Figures in PostScript form are also welcome, and should be submitted at the same time as the $\text{\TeX}$ file for the paper (in zipped format if appropriate).

When a paper has been accepted for publication, the corresponding author will be able to choose to publish the paper under a regular publication agreement or under a fully Open Access agreement.

In the case where authors choose to publish a paper as a regular publication, they will need to sign the Journal’s standard License to Publish form (<https://www.cambridge.org/core/journals/proceedings-of-the-edinburgh-mathematical-society/information/author-publishing-agreement>): under the conditions detailed on such form, when an article is accepted, its authors are free to post their version of the accepted manuscript on a website or repository. As such, Proceedings of the Edinburgh Mathematical Society is compliant with the Open Access mandates of the vast majority of academic institutions and funding sources.

In the case where authors choose to publish a paper under a fully Open Access agreement, they will be asked to sign the alternative Open Access form (<http://journals.cambridge.org/images/fileUpload/images/PEMS-ctf-oa.pdf>) and, upon payment of a one-off Article Processing Charge of UK£1780/US\$2835 (in 2016), the final published Version of Record shall be made freely available to all in perpetuity, and will be published under a creative commons licence, enabling its free re-use and re-distribution.

Please note that publication under a fully Open Access agreement is part of the Cambridge Open option (for more details, please see: <http://journals.cambridge.org/action/displaySpecialPage?pageId=4576>).

One proof is supplied, which should be corrected and returned promptly. Excessive corrections may be charged to authors. Authors will receive an electronic offprint in pdf format.

Proceedings of the Edinburgh Mathematical Society

VOLUME 68 (SERIES II) PART 3

AUGUST 2025

Noetherianity of twisted Zhu's algebras and bimodules <i>Jianqi Liu</i>	675
A note on separability in outer automorphism groups <i>Francesco Fournier-Facio</i>	705
Mean values of multiplicative functions and applications to residue-class distribution <i>Paul Pollack and Akash Singha Roy</i>	712
Hardy spaces and Riesz transforms on a Lie group of exponential growth <i>Peter Sjögren and Maria Vallarino</i>	731
Tate duality and transfer for symmetric algebras over complete discrete valuation rings <i>Markus Linckelmann</i>	763
Linearity of compact R-analytic groups <i>Montserrat Casals-Ruiz and Andoni Zozaya</i>	787
Iterating additive polynomials over finite fields <i>Lucas Reis</i>	795
A logarithmic uncertainty principle for functions with radial symmetry <i>Jacopo Bellazzini and Matteo Nesi</i>	811
Hardy and Rellich inequalities with Bessel Pairs <i>Michael Ruzhansky and Bolys Sabitbek</i>	825
Bounds on the Pythagoras number and indecomposables in biquadratic fields <i>Magdaléna Tinková</i>	843
On some products of groups <i>Luigi Iorio and Marco Trombetti</i>	869
Derived functors and Hilbert polynomials over hypersurface rings <i>Tony J. Puthenpurakal</i>	898
All, most, some? On diffeomorphisms of the interval that are distorted and/or conjugate to powers of themselves <i>Hélène Eynard-Bontemps and Andrés Navas</i>	909
Zero-one law of orbital limit points for weighted shifts <i>Antonio Bonilla, Rodrigo Cardeccia, Karl-G. Grosse-Erdmann and Santiago Muro</i>	945
On Growth Functions of Coxeter Groups <i>Sebastian Bischof</i>	979
