# Advanced airborne equipment for today's aircraft.

## Artificial Horizons

Ferranti has built over 16000 artificial horizons, providing either a main or standby instrument for nearly every British service aircraft since the early 1950's. They are also widely used in civil aircraft including Vanguards, VC.10s, Tridents, BAC.1-11s, DC.8s and Boeing 707s. They are currently available in case sizes from 4½in to 2¾in conforming to SAE, MIL, STANAG and ATI standards.

## Directional Gyros and Turn and Slip Indicators

Panel mounted or remote directional gyro instruments for a wide range of applications. Also turn and slip indicators.

## Electrical Systems Equipment

### Airborne Battery Chargers

Based on our T.R.U. and static inverter technology we can provide accurately controlled battery chargers for the latest aircraft batteries.

### Static Inverters

Standard units both for specific operational requirements and for multi-purpose operation, as well as static power supply equipment specially designed to meet customers' individual requirements.

### Transformer Rectifier Units

Convection, blower or force cooled. Ferranti T.R.Us have over six million unit flying hours to their credit in both military and civil aircraft. High stability silicon diodes are used for the rectifier units. Four basic designs are available in different current ratings.

## Vertical Signalling Gyros

in different types to suit your needs. The FS.16 series of gyro units give outputs of pitch and roll proportional to the aircraft attitude, using

3-line synchros and precision potentiometers. Many designers incorporate them to provide datum references for instrument and avionic systems, auto-pilots and attitude indicators.

## Accelerometers

Ferranti single axis accelerometers are force-feedback pendulous devices capable of sensing a wide range of acceleration with extreme accuracy. They are high grade instruments and are available for inertial and non-inertial applications.

For more information about any of these products contact:

Ferranti Limited,  
Aircraft Equipment Department,  
Lily Hill House, Lily Hill Road,  
Bracknell, Berkshire. RG12 2SJ.  
Tel: 0344 (Bracknell) 24001.  
Telex: 848117.

### Current and Voltage Sensors

Applications include the monitoring of a.c. or d.c. busbar voltages, of currents in de-icing circuits or of the output of T.R.Us etc, the output signal being used, for example, to switch contactor coils, warning lamps or failure indicators.

## ASSISTANT MANAGER AIRCRAFT TYRES

An international rubber company is expanding its Aero Sales Division to meet the increasing demand for its product and requires a manager to assist the present division manager in all areas of his responsibilities.

Candidates should have a good knowledge of aircraft tyres and their application for military and civil use. The ability and sales personality to successfully negotiate with senior air-line executives at home and abroad is of prime importance.

Experience in the tyre and/or aircraft industry is essential.

The successful candidate could eventually take over the Division within the next 3 years.

Salary, pension and other fringe benefits are excellent and the position includes a company car and expenses.

# Our service is Trident tested many times a day.

Number One in Europe. That's no idle boast by British Airways BEA, when you look at their international schedule.

More than 800 Trident flights a week leave Heathrow for destinations as diverse as Reykjavik, Moscow and Agadir.

Add to this the British Airways BEA domestic network, with around 150 flights daily, and one starts to see

the sheer scale of their operation.

Air BP is the major supplier of aviation fuels to British Airways BEA at Heathrow. A heavy responsibility, as a few minutes' delay can affect the timetable for several hours.

The BP aviation service is number one with the number one airline. And with other major operators throughout Great Britain.
