Contents

PART 1 MARCH 1982

Iterated extensions	<i>R. Ellis and S. Glasner</i>	1
Subshifts on surfaces	<i>D. Fried</i>	15
Equilibrium states for piecewise monotonic transformations	<i>F. Hofbauer and G. Keller</i>	23
An ε -free Rohlin lemma	<i>E. Lehrer and B. Weiss</i>	45
Dynamical properties of quasihyperbolic toral automorphisms	<i>D. A. Lind</i>	49
Geodesics on modular surfaces and continued fractions	<i>R. Moeckel</i>	69
A mixing Markov chain with exponentially decaying return times is finitarily Bernoulli	<i>D. J. Rudolph</i>	85
Repellers for real analytic maps	<i>D. Ruelle</i>	99
Dimension, entropy and Lyapunov exponents	<i>L.-S. Young</i>	109

PART 2 JUNE 1982

The bifurcation of periodic orbits of one-dimensional maps	<i>L. Block and D. Hart</i>	125
The bifurcation of homoclinic orbits of maps of the interval	<i>L. Block and D. Hart</i>	131
On uniformly distributed orbits of certain horocycle flows	<i>S. G. Dani</i>	139
Isomorphisms between diffeomorphism groups	<i>R. P. Filipkiewicz</i>	159
Isentropic fitting of Anosov automorphisms	<i>D. Fried</i>	173
Some remarks on Birkhoff and Mather twist map theorems	<i>A. Katok</i>	185
On the subsystems of topological Markov chains	<i>W. Krieger</i>	195
A proof of the estimation from below in Pesin's entropy formula	<i>F. Ledrappier and J.-M. Strelcyn</i>	203
Periodic points of maps of degree one of a circle	<i>M. Misiurewicz</i>	221
Perturbations and transitivity for certain maps of an interval	<i>M. Misiurewicz</i>	229
Symétrie et forme normale des centres et foyers dégénérés	<i>R. Moussu</i>	241

PARTS 3 AND 4 DECEMBER 1982

Dedication to V. M. Alexeyev	253
------------------------------	-----

V. M. Alexeyev bibliography	255
Existence of a bounded function of the maximal spectral type <i>V. M. Alexeyev</i>	259
Accuracy of Kepler approximation for fly-by orbits near an attracting centre <i>V. M. Alexeyev and Yu. S. Osipov</i>	263
Singularities of Legendre varieties, of evolvents and of fronts at an obstacle <i>V. I. Arnol'd</i>	301
On the ergodicity of geodesic flows <i>W. Ballmann and M. Brin</i>	311
Invariant measures for some one-dimensional attractors <i>M. V. Jacobson</i>	317
Entropy and closed geodesics <i>A. Katok</i>	339
Perturbations of random matrix products in a reducible case <i>Y. Kifer and E. Slud</i>	367
Finitely-additive invariant measures on Euclidean spaces <i>G. A. Margulis</i>	383
Glancing billiards <i>J. N. Mather</i>	397
Attracting Cantor set of positive measure for a C^∞ map of an interval <i>M. Misiurewicz</i>	405
Gibbs measures for partially hyperbolic attractors <i>Ya. B. Pesin and Ya. G. Sinai</i>	417
Examples of conservative diffeomorphisms of the two-dimensional torus with coexistence of elliptic and stochastic behaviour <i>F. Przytycki</i>	439
Factors of horocycle flows <i>M. Ratner</i>	465
Ergodic behaviour of Sullivan's geometric measure on a geometrically finite hyperbolic manifold <i>D. J. Rudolph</i>	491
Entropy estimates for geodesic flows <i>P. Sarnak</i>	513
On the ergodic properties of piecewise linear perturbations of the twist map <i>M. Wojtkowski</i>	525
Index to Volume 2	543

THE PREPARATION OF TYPESCRIPTS

The attention of authors is particularly directed to the following requests:

1 *Typescript*

Papers should be typed, double-spaced, on one side of white paper (of which A4, 210 by 297 mm, is a suitable size). The pages must be numbered. Generous margins should be left at the side, top and bottom of each page. The copy sent must be clear.

A cover page should give the title, the author's name and institution, with the address to which mail is to be sent.

The title, while brief, must be informative (e.g. *A new proof of the ergodic theorem*, whereas *Some applications of a theorem of Birkhoff* would be useless).

The first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician).

The following notes are intended to help the author in preparing the typescript. New authors may well enlist the help of senior colleagues, both as to the substance of their work and the details of setting it out correctly and attractively.

2 *Notation*

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and reduce the chance of error.

For instance n_k (n sub k) is common usage, but avoid if possible using c sub n sub k . Fractions are generally best expressed by a solidus. Complicated exponentials like

$$\exp \{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

In the typescript, italics, small capitals and capitals are specified by single, double and triple underlining. Bold-faced type is shown by wavy underlining; wavy will be printed **wavy**.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o , O , o , O , 0 ; x , X , \times ; ϕ , Φ , \emptyset ; l , 1 ; ε , ϵ ; κ , k .

Greek letters can be denoted by Gk in the margin.

If an author wishes to mark the end of the proof of a theorem, the sign \square may be used.

Footnotes should be avoided.

3 *Diagrams*

It is extremely helpful if diagrams are drawn in Indian ink on white card, faintly blue or green-lined graph paper, or tracing cloth or paper. *Symbols, legends and captions should be given on a transparent overlay*. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the typescript:

Figure 1 here

The author's name in pencil must be on all separate sheets of diagrams.

A figure is expensive to reproduce and should be included only when the subject matter demands it, or when it greatly clarifies the exposition.

The publisher recognizes that some authors do not have the facilities for producing drawings of a sufficiently high standard to be reproduced directly and is therefore willing to have such diagrams re-drawn, provided that they are clear.

4 *Tables*

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

5 *References*

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford & J. T. Schwartz *Linear Operators* Part I. Wiley: New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for function: in the unit circle. *J. Analyse Math.* **23** (1970) 236-268.

Ergodic theory and dynamical systems

VOLUME 2 PARTS 3 AND 4 DECEMBER 1982

CONTENTS

Dedication to V. M. Alexeyev	253
V. M. Alexeyev bibliography	255
<i>Alexeyev, V. M.</i> Existence of a bounded function of the maximal spectral type	259
<i>Alexeyev, V. M. and Osipov, Yu. S.</i> Accuracy of Kepler approximation for fly-by orbits near an attracting centre	263
<i>Arnol'd, V. I.</i> Singularities of Legendre varieties, of evolvents and of fronts at an obstacle	301
<i>Ballmann, W. and Brin, M.</i> On the ergodicity of geodesic flows	311
<i>Jacobson, M. V.</i> Invariant measures for some one-dimensional attractors	317
<i>Katok, A.</i> Entropy and closed geodesics	339
<i>Kifer, Y. and Slud, E.</i> Perturbations of random matrix products in a reducible case	367
<i>Margulis, G. A.</i> Finitely-additive invariant measures on Euclidean spaces	383
<i>Mather, J. N.</i> Glancing billiards	397
<i>Misiurewicz, M.</i> Attracting Cantor set of positive measure for a C^∞ map of an interval	405
<i>Pesin, Ya. B. and Sinai, Ya. G.</i> Gibbs measure for partially hyperbolic attractors	417
<i>Przytycki, F.</i> Examples of conservative diffeomorphisms of the two-dimensional torus with coexistence of elliptic and stochastic behaviour	439
<i>Ratner, M.</i> Factors of horocycle flows	465
<i>Rudolph, D. J.</i> Ergodic behaviour of Sullivan's geometric measure on a geometrically finite hyperbolic manifold	491
<i>Sarnak, P.</i> Entropy estimates for geodesic flows	513
<i>Wojtkowski, M.</i> On the ergodic properties of piecewise linear perturbations of the twist map	525
<i>Index</i>	543
