	PAGE
<b>Arthan, R. D.</b> Localization of stable homotopy rings . . . . .	295
<b>Balanda, K. P.</b> Maximally almost disjoint families of representing sets . . . . .	1
<b>Baumslag, G.</b> Free subgroups of certain one-relator groups defined by positive words . . . . .	247
<b>Bayer-Fluckiger, E. &amp; Stoltzfus, N. W.</b> Indecomposable knots and concordance . . . . .	495
<b>Borcea, Ciprian.</b> Families of smooth hypersurfaces on certain compact homogeneous complex manifolds . . . . .	315
<b>Bott, R. T.</b> Singularity of generalized Riesz products . . . . .	335
<b>Brown, M. L.</b> Defective big Cohen–Macaulay modules . . . . .	253
<b>Bruce, J. W.</b> Wavefronts and parallels in Euclidean space . . . . .	323
<b>Buoncrisiano, S. &amp; Hacon, D.</b> Resolving homologies in BPL and PL characteristic numbers . . . . .	263
<b>Conway, J. H. &amp; Sloane, N. J. A.</b> The Coxeter–Todd lattice, the Mitchell group, and related sphere packings . . . . .	421
<b>Coppel, W. A.</b> Šarkovskii-minimal orbits . . . . .	397
<b>Cox, J. T. &amp; Durrett, R.</b> Oriented percolation in dimensions $d \geq 4$ : bounds and asymptotic formulas . . . . .	151
<b>Durrett, R. &amp; Cox, J. T.</b> Oriented percolation in dimensions $d \geq 4$ : bounds and asymptotic formulas . . . . .	151
<b>Embrechts, P. &amp; Omeij, E.</b> On subordinated distribution and random record processes . . . . .	339
<b>Erle, D.</b> Topological Hopf bifurcation in the plane . . . . .	113
<b>Fleming, D. J. &amp; Giarrusso, D. M.</b> Topological decompositions of the duals of locally convex operator spaces . . . . .	307
<b>Gáspár, Zs. &amp; Tarnai, T.</b> Improved packing of equal circles on a sphere and rigidity of its graph . . . . .	191
<b>Giarrusso, D. M. &amp; Fleming, D. J.</b> Topological decompositions of the duals of locally convex operator spaces . . . . .	307
<b>Goodey, P. R.</b> Homothetic ellipsoids . . . . .	25
<b>Hacon, D. &amp; Buoncrisiano, S.</b> Resolving homologies in BPL and PL characteristic numbers . . . . .	263
<b>Hall, P.</b> Edgeworth expansion of the distribution of Stein’s statistic . . . . .	162
<b>Hemmer, P. C. &amp; Hemmer, S.</b> Recurrences in multidimensional arithmetic sequences . . . . .	393
<b>Hemmer, S. &amp; Hemmer, P. C.</b> Recurrences in multidimensional arithmetic sequences . . . . .	393
<b>Hewitt, E. &amp; Koshi, S.</b> Orderings in locally compact abelian groups and the theorem of F. and M. Riesz . . . . .	441
<b>Hill, R.</b> On intrinsic eigenstates in plasticity with generalized variables . . . . .	177
<b>Johnstone, P. T.</b> Quotients of decidable objects in a topos . . . . .	409
<b>Karanasios, S.</b> Perturbation of a nest algebra module . . . . .	303
<b>Karanikas, C.</b> S.I.P. measures on metrizable groups . . . . .	511
<b>King, W. P. C.</b> Semifinite traces on JBW-algebras . . . . .	503
<b>Koshi, S. &amp; Hewitt, E.</b> Orderings in locally compact abelian groups and the theorem of F. and M. Riesz . . . . .	441
<b>Kupka, J. G.</b> Two limit theorems for ergodically regenerated stochastic processes. . . . .	519
<b>Kuttner, B. &amp; Maddox, I. J.</b> Lacunary theorems for Cesàro means . . . . .	231
<b>Lewis, L. G.</b> The uniqueness of bundle transfers . . . . .	87
<b>Lichtman, A. I.</b> Localization in enveloping algebras . . . . .	467

	PAGE
<b>Lorimer, P. J.</b> Corrigenda: On projective planes of type $(6, m)$ . . . . .	379
<b>MacLachlan, C. &amp; Rosenberger, G.</b> Two-generator arithmetic Fuchsian groups . . . . .	383
<b>Maddox, I. J.</b> FK spaces which include strongly summable sequences . . . . .	131
<b>Maddox, I. J. &amp; Kuttner, B.</b> Lacunary theorems for Cesàro means . . . . .	231
<b>Mansfield, A.</b> Determining the thickness of graphs is NP-hard . . . . .	9
<b>Mason, R. C.</b> The hyperelliptic equation over function fields . . . . .	219
<b>May, J. P. &amp; Taylor, L. R.</b> Generalized splitting theorems . . . . .	73
<b>Mitchell, W. J. R.</b> A characterization of piecewise linear homology manifolds . . . . .	271
<b>Montiel, S. &amp; Romero, A.</b> Holomorphic sectional curvatures of indefinite complex Grassmann manifolds . . . . .	121
<b>Morton, H. R.</b> An irreducible 4-string braid with unknotted closure . . . . .	259
<b>Munn, W. D.</b> On commutative semigroup algebras . . . . .	237
<b>Ngô Việt Trung.</b> Absolutely superficial sequences . . . . .	35
<b>Omey, E. &amp; Embrechts, P.</b> On subordinated distributions and random record processes . . . . .	339
<b>Partington, J. R.</b> On nearly uniformly convex Banach spaces . . . . .	127
<b>Plotnick, S. P.</b> Infinitely many disk knots with the same exterior . . . . .	67
<b>Quách Thi Cẩm Vân.</b> On a theorem on partially summing tangles by Lickorish . . . . .	63
<b>Ratcliff, L. J.</b> Note on analytic spread and asymptotic sequences . . . . .	49
<b>Reade, J. B.</b> Eigen-values of Lipschitz kernels . . . . .	135
<b>Romero, A. &amp; Montiel, S.</b> Holomorphic sectional curvature of indefinite Grassmann manifolds . . . . .	121
<b>Rosenberger, G. &amp; MacLachlan, C.</b> Two-generator arithmetic Fuchsian groups . . . . .	383
<b>Rudraiah, N. &amp; Shivaraya, E. S.</b> On the interaction between Tollmien–Schlichting and Rayleigh–Bénard instabilities in the presence of a longitudinal magnetic field . . . . .	355
<b>Rutter, J. W.</b> The group of homotopy self-equivalence classes of CW complexes . . . . .	275
<b>Shivaraya, E. S. &amp; Rudraiah, N.</b> On the interaction between Tollmien–Schlichting and Rayleigh–Bénard instabilities in the presence of a longitudinal magnetic field . . . . .	355
<b>Sloane, N. J. A. &amp; Conway, J. H.</b> The Coxeter–Todd lattice, the Mitchell group, and related sphere packings . . . . .	421
<b>Smith, L.</b> Transfer and ramified coverings . . . . .	485
<b>Smith, S. P.</b> Krull dimension of factor rings of the enveloping algebra of a semi-simple Lie algebra . . . . .	459
<b>Stoltzfus, N. W. &amp; Bayer-Fluckiger, E.</b> Indecomposable knots and concordance . . . . .	495
<b>Tarnai, T. &amp; Gáspár, Zs.</b> Improved packing of equal circles on a sphere and rigidity of its graph . . . . .	191
<b>Taylor, L. R. &amp; May, J. P.</b> Generalized splitting theorems . . . . .	73
<b>Ursell, F.</b> Integrals with a large parameter: Hilbert transforms . . . . .	141
<b>Wall, C. T. C.</b> Geometric invariant theory of linear systems . . . . .	57
<b>Wall, C. T. C.</b> Pencils of real binary cubics . . . . .	477

## THE PREPARATION OF MANUSCRIPTS

The attention of authors is particularly directed to the following requests.

1. Papers should be typed, double-spaced, on one side of white paper (of which A4, 210 by 297 mm, is a suitable size). The pages must be numbered. Margins of 30 mm should be left at the side, top and bottom of each page. Two clear copies should be sent.

A cover page should give the title, the author's name and institution, with the address at which mail is to be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas *Some applications of a theorem of G. H. Hardy* would be useless).

The first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician).

The following notes are intended to help the author in preparing the typescript. New authors may well enlist the help of senior colleagues, both as to the substance of their work and the details of setting it out correctly and attractively.

### 2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and reduce the chance of error.

For instance  $n_k$  ( $n$  sub  $k$ ) is common usage, but avoid if possible using  $c$  sub  $n$  sub  $k$ . Fractions are generally best expressed by a solidus. Complicated exponentials like

$$\exp \{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

In the manuscript, italics, small capitals and capitals are specified by single, double and triple underlining. Bold-faced type is shown by wavy underlining; wavy will be printed wavy.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as  $o$ ,  $O$ ,  $o$ ,  $O$ ,  $0$ ;  $x$ ,  $X$ ,  $\times$ ;  $\phi$ ,  $\Phi$ ,  $\emptyset$ ;  $l$ ,  $1$ ;  $\epsilon$ ,  $\epsilon$ ;  $\kappa$ ,  $k$ .

Greek letters can be denoted by Gk in the margin.

If an author wishes to mark the end of the proof of a theorem, the sign  $\blacksquare$  may be used.

Footnotes should be avoided.

### 3. Diagrams

It is extremely helpful if diagrams are drawn in Indian ink on white card, faintly blue or green-lined graph paper, or tracing cloth or paper. *Symbols, legends and captions should be given on a transparent overlay*. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the manuscript:

Figure 1 here

The author's name in pencil must be on all separate sheets of diagrams.

A figure is expensive to reproduce and should be included only when the subject matter demands it, or when it greatly clarifies the exposition.

The Society recognizes that some authors do not have the facilities for producing drawings of a sufficiently high standard to be reproduced directly and it is therefore willing to have such diagrams re-drawn, provided that they are clear.

### 4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

### 5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. A reference to a book should give the title, in italics, and then in Roman type the publisher's name and the place and year of publication:

(4) JEFFREYS, H. *The earth*, 5th edition, University Press, Cambridge, 1970.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Titles should be abbreviated as in *Mathematical Reviews*:

(6) LITTLEWOOD, J. E. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* 23 (1970), 237-268.

*Mathematical Proceedings of  
the Cambridge Philosophical Society*

MPCPCO 93 (Pt 3) 383-536 (1983) 0305-0041 May 1983
