30% increase
in rate of climb and
100% more ceiling

Performance figures corrected for International Standard Atmospheric conditions during recent flying trials established the remarkable superiority of the Alvis Leonides Major engine in the Westland Whirlwind helicopter. Payload, operational height and range are all substantially increased.

HELICOPTER LIFT...

The versatility of Westland helicopters is well illustrated by the various tasks for which they are regularly employed for profit

A great chemical firm uses Westland helicopters in various parts of the world for spraying insecticides to preserve vast crop areas, a sanitary authority uses Westland helicopters to combat malaria around a densely populated city

In New Guinea, merchant venturers are transporting (in sections) a complete oil drilling rig over impassable jungle —taking off from a barge in a mangrove swamp and landing at an equally practical (if not very South Bank) heliport twenty-five miles away

Three Westland helicopter types are built to lift half, one, and two-and-a-half tons, respectively, and soon a fourth, now in prototype form, will lift over five tons

These are the contractors' sky-hooks, the keys to hidden reserves of profit in the hitherto inaccessible places of the world

Reliability, flying history and availability make Westland helicopters the pioneers' choice and the pioneers are reaping the rewards—and ordering more
