

*Proceedings of the Royal Society of Edinburgh: Section A* is a general journal, and papers in all areas of mathematics will be considered. Papers to be considered for publication should be sent to the Publications Manager, The Royal Society of Edinburgh, 22 George Street, Edinburgh EH2 2PQ, Scotland.

A paper by more than one author must be submitted with a statement, signed by each author, to the effect that the paper in its entirety is approved by the joint authors and naming the author who will be responsible for correspondence with the Society.

Authors will receive fifty (50) offprints free of charge, this number to be shared between joint authors. Additional offprints may be obtained, in units of fifty, at a fixed scale of prices given on a form which will be attached to the proof.

In view of the high cost of publication, authors must prepare their papers as concisely as possible. Manuscripts should be submitted in triplicate and preferably should be typewritten on one side of A4 paper, double spaced with adequate margins. Authors are advised to retain a copy of their papers as the Society cannot accept responsibility for any loss.

Every paper must be accompanied by a Synopsis, in general not exceeding two hundred words, which will be printed in small type at the beginning of the paper.

References within the text should be indicated by bold numbers in square brackets, e.g. [2] or [3, p. 167]. For style of references at end of text, see recent issues of *Proceedings A*.

Authors should ensure that punctuation carries through the mathematics in the proper manner. The use of hyphens should be consistent. In the text avoid such abbreviations as: iff, w.r.t., a.e.,  $\forall$ ,  $\exists$ , and thm.

Footnotes should be avoided. Headings should not be underlined. Every effort should be made to avoid complicated subscripts, superscripts, ranges of summation and integration. Horizontal fraction signs should normally be avoided: use either solidus signs / or negative exponents. Replace  $e^{(\dots)}$  by  $\exp[\dots]$  if the expression in parenthesis is complicated. Simple formulae should *not* be displayed unless they require a formula number. Use the prime ' or  $d/dx$ , but preferably not a dot, to denote ordinary differentiation. If possible use subscripts to denote partial differentiation of  $\partial/\partial x$  etc. Bars reaching over several letters should be avoided: use  $\sqrt{(\ )}$  or the exponent  $1/2$  for the square root. Sub-subscripts and super-superscripts should be avoided if possible: bars and other devices over indices cannot be supplied.

Note that confusion very often arises between 1 (one) and  $l$  (ell); 0 (zero) and  $O$  (Capital oh);  $\circ$  (composition) and  $o$  (lower case oh);  $x$  and  $\times$ ;  $U$  and  $\cup$ ;  $c$  and  $\subset$ ;  $\in$  (belongs to) and  $\epsilon$  (epsilon);  $\emptyset$  (empty set) and  $\phi$  (phi);  $;$  and comma  $,$ ; prime ' and  $^1$ ;  $K$  and  $\kappa$ ;  $p$  and  $\rho$ ;  $w$  and  $\omega$ ;  $\sum$  (summation) and  $\Sigma$  (capital sigma);  $\prod$  (product) and  $\Pi$  (capital pi);  $v$  (lower case vee) and  $\nu$  (Greek nu);  $a$  (lower case a) and  $\alpha$  (Greek alpha);  $y$  (lower case y) and  $\gamma$  (Greek gamma). Please provide pencilled indicators in the margin where necessary. Where capitals and lower case of the same shape have to be printed, please indicate accordingly. Show italics by single underlining (except in the formulae which are set up normally in italics), bold face/Clarendon by wavy underlining and Greek by red underlining.

The statement of theorems, lemmas, et cetera, will be printed in italics and should be underlined. In definitions key words only should be in italics.

Equations should be indicated by numbers in parentheses in the right-hand margin.

Proofs of papers will be sent to the author. The cost of *authors' corrections in excess of five per cent* of the printers' charge for the setting of a particular paper *will be charged to the author*.

CONTENTS

SHIGEHARU TAKENO	
Initial boundary value problems for isentropic gas dynamics	1
G. A. FRANCFORT	
Homogenisation of a class of fourth order equations with application to incompressible elasticity	25
J. W. RUTTER	
The group of homotopy self-equivalences of non-simply-connected spaces using Postnikov decompositions	47
ALMUT BURCHARD, BO DENG and KENING LU	
Smooth conjugacy of centre manifolds	61
YASUHIRO FURUSHO	
Existence of positive entire solutions for weakly coupled semilinear elliptic systems	79
M. GIAQUINTA, G. MODICA and J. SOUČEK	
The gap phenomenon for variational integrals in Sobolev spaces	93
IRENE FONSECA	
Lower semicontinuity of surface energies	99
PHILIP W. WALKER	
Initial conditions for integrable-square solutions to singular differential equations	117
ABDULLAHI UMAR	
On the semigroups of order-decreasing finite full transformations	129
PHILIP KORMAN	
On periodic solutions for singular perturbations problems	143
DAWEI SHEN	
On successive coefficients of univalent functions	153
M. BENAMMAR	
Classification of regularly solvable first-order differential operators	165
JITSURO SUGIE	
On the stability for a population growth equation with time delay	179
VLADIMÍR ŠVERÁK	
Rank-one convexity does not imply quasiconvexity	185
