SEPARATION

Decca's high accuracy and coverage at all altitudes allows close lateral track separation of all aircraft. The new large scale charts permit safe separation of helicopters in the confined airspace frequently allocated to this type of aircraft.

COVERAGE

With solid cover at low altitudes Decca suits the helicopter down to the ground. Unaffected by altitude, terrain, weather or the limitations of line of sight systems, the Decca Navigator System can be used to navigate with the greatest accuracy from city centre to city centre. Over some million square miles in Europe, the system is sufficiently accurate to be used as an approach aid.

FLEXIBILITY

This area coverage system allows any predetermined track to be maintained precisely. The flight log gives a precise and continuous display of the aircraft's position at all times, thus allowing complete flexibility of routing.

INTEGRATION

Decca, the only system available to every type of aircraft both rotary and fixed wing, irrespective of altitude, ensures the maximum utilisation of available air space by providing solid cover at all altitudes. Light and compact enough to be fitted in the smallest aircraft and with the pictorial presentation of the flight log, Decca allows existing air traffic control procedures to be carried out with great accuracy and ease.

Power for the Widgeon

The Alvis Leonides which powers the Westland Widgeon has already proved itself in many thousand hours of helicopter operation and is in extensive use with the Royal Navy, the Army, the Royal Air Force and many civilian operators.

ALVIS **LEONIDES AERO ENGINES**
ALVIS LIMITED COVENTRY ENGLAND

Chosen by the world's largest commercial operator of helicopters, Okanagan Helicopters of Vancouver, the Rotodyne vertical take off airliner will be in service in two to three years time

The Rotodyne Era of fast, convenient, comfortable travel is closer than most people have realised. Because of its unique potential the Rotodyne is regarded as an 'airliner of the future'. And so it is. But the threshold of that future is now just a short step away.

OBJECTS OF THE ASSOCIATION

The objects of the Association are to collect compile and disseminate information of a technical and semi technical nature pertaining to Helicopters and all other types of Rotating Wing Aircraft. The Association aims to work in close co operation with existing Aeronautical Bodies on matters affecting its objects and it may act as an Advisory Body in the promotion of legislation calculated to be of benefit to the development of Rotating Wing Aircraft

Heavy Duty Helicopter

The Westminister is the largest conventional helicopter in the Western world. It has the ability to transport as many as 51 troops in battle attire, to convey mobile field units such as hospitals, food kitchens, living huts, vehicle servicing centres and operations rooms from supply bases to assault areas, to recover unserviceable aircraft and ground vehicles and to transport complete missiles from storage units to firing sites. All of these capabilities meet the requirements of modern army, naval and air operations.

The Westminister is powered by two Napier "Eland" gas turbine engines and can operate with full payload on one of them if need be.

Built and flying within eight months the Westminister Crane/Transporter is the greatest helicopter project ever undertaken as a private venture by a British aircraft constructor. Which is one more reason why
