BLADES of POWER

Lamination was the secret of the strength and resilience of the famous Damascus blades. By skilfully welding together pieces of iron of different qualities the ancient Oriental swordsmiths made blades of a steel whose quality was unsurpassed until Bessemer. Now lamination skill and technique reaches its zenith in modern blades of power by

on track . . .

Wherever helicopters fly on regular services whether from city centres or airfields in difficult terrain the need for an all-altitude navigation system of high accuracy is vital. Only Decca provides such precise information continuously with pictorial presentation in the cockpit. Being a low frequency hyperbolic navigation system Decca gives high-accuracy coverage down to ground level unaffected by weather or intervening obstacles. The system is so precise that it can be also used as an approach aid over more than a million square miles of Europe. Because of Decca's high accuracy at all altitudes it is the only system providing both close lateral separation in flight and flexibility in routeing.

P531

HELICOPTER

The P 531 is designed to meet the demand for a compact, turbine powered general purpose helicopter. Good performance and carrying capacity, versatility and ease of servicing are features of this functional aircraft. The P 531 is on order for the Ministry of Aviation for the Royal Navy.

*The P 531 is being developed
for use in the following roles*

ANTI-SUBMARINE SEARCH & STRIKE
AIRBORNE SUPPLY LIAISON
TRAINING AIR/SEA RESCUE
CASUALTY EVACUATION
LIGHT FREIGHTER RECONNAISSANCE

It is designed to accept a choice of engines in the 1 000 h p range derated to 650 h p thus giving it a performance largely unaffected by climatic conditions and altitude.

Whether it's at one end, as in the quietly efficient Westland Wessex — whether it's at both ends, as in the outstanding Bristol 192 — whether it's upright, horizontal or in any position in between, the Napier Gazelle free turbine engine will always satisfy the exacting demands of helicopter operation. Designed specifically for use in helicopters, the Napier Gazelle, with its "any angle" installation, relieves the designer of many accepted limitations and gives him more opportunity to make proper use of fuselage space.

OBJECTS OF THE ASSOCIATION

The objects of the Association are to collect compile and disseminate information of a technical and semi technical nature pertaining to Helicopters and all other types of Rotating Wing Aircraft. The Association aims to work in close co operation with existing Aeronautical Bodies on matters affecting its objects and it may act as an Advisory Body in the promotion of legislation calculated to be of benefit to the development of Rotating Wing Aircraft
