INVESTIGATION THE ROLE OF PSYCHOLOGICAL, ENVIRONMENTAL AND PHYSICAL FACTORS IN TENDENCY TO ADDICTION

S.J. Mosavi Amiri

Medical Clinic of Dr. Mosavi, Babol, Iran

Introduction & objectives: For better understanding of the effective factors in tendency to addiction, the research aimed to survey this question what is the first cause of addiction?

Psychological, Environmental or Physical causes.

Method: 80 addicted people were randomly selected and Abuse Drug Assessment Inventory (ADAI) was administered on them. Chi Square formula was used to analyze the results.

Results: Findings showed 55 percent of tendency to addiction was psychological. Also more analyzing showed 65 percent of continuing causes of addiction were psychological factors such as fear, anxiety, sorrow.

Conclusion: In regard to results we should put more emphasis on psychological prevention and treatment methods so that both tendency to addiction and continuing causes of addiction decrease and control.
