

APHASIA

A Clinical Perspective

D. Frank Benson and Alfredo Ardila

This book presents an up-dated and integrated analysis of the different aspects of the language disturbances associated with brain pathology. In examining the different types of aphasia, the authors combine two clinical approaches: the neurological and the neuropsychological. Although they stress the clinical aspects of aphasia syndromes, they also review assessment techniques, linguistic analyses, problems of aphasia classification, and frequently occurring related disorders such as alexia, agraphia, acalculia, and anomia.

1996 456 pp.; 50 illus. \$49.95

NEUROPSYCHOLOGICAL ASSESSMENT

Third Edition

Muriel Deutsch Lezak

"In every field of scientific study, a few books achieve the regal status of helping to define that field. Without question, *Neuropsychological Assessment* by Muriel Lezak has achieved this honor for the discipline of clinical neuropsychology. For almost 20 years now, the first and second editions of Lezak's book have been the primary user's guide for both neophyte and seasoned neuropsychologists. The recently published third edition will proudly and adeptly carry on this tradition well into the next century."

—*Journal of the International Neuropsychological Society*

1995 1056 pp.; 110 illus. \$65.00

PEDIATRIC NEUROPSYCHOLOGY IN THE MEDICAL SETTING

Ida Sue Baron, Eileen B. Fennell, and Kytja K.S. Voeller

This book provides a basis for understanding and evaluating the impact of medical conditions on the developing brain and it offers much practical clinical information.

1995 464 pp.; 3 illus. \$55.00

TRAUMATIC HEAD INJURY IN CHILDREN

Edited by Sarah H. Broman and Mary Ellen Michel

"*Traumatic Head Injury in Children* succeeds in taking a reflective step back from the lab bench to consider what has been learned and what needs to be done in order to improve future studies regarding the outcome of head injury in children. I would recommend this work to the full range of readers, from senior researchers and clinicians to students who are making the transition from their classroom textbooks to the primary research literature concerning head injury."

—*Journal of Child Neuropsychology*

1995 320 pp.; 36 illus. \$45.00

DEVELOPMENTAL NEUROPSYCHIATRY

Volume I: Fundamentals

Volume II: Assessment, Diagnosis, and Treatment of Developmental Disorders

James C. Harris

"This is an excellent, comprehensive and unique new book for students and practitioners in the field of child neuropsychiatry. It will absolutely be the standard in the field. Anyone who is involved in the mental healthcare of children and adolescents should read this book.

Rating: ***** —*Doody's Journal*

Volume I: 1995 288 pp.; 34 illus. \$49.95

Volume II: 1995 624 pp.; 18 illus. \$79.95

Forthcoming in a new edition

NEUROPSYCHOLOGICAL ASSESSMENT OF NEUROPSYCHIATRIC DISORDERS

Second Edition

Edited by Igor Grant and Kenneth M. Adams

It has been almost a decade since the First Edition of this book was published. While the authors have retained the same general structure—with the addition of a set of three chapters on psychosocial outcomes—virtually the entire book has been rewritten. Considerably enlarged in size, this book will remain the basic reference on the neuropsychological aspects of diseases affecting brain and behavior. From reviews of the First Edition: "Fills a need and is likely to become a standard reference." —*American Journal of Psychiatry*

September 1996 608 pp.; 52 illus. \$65.00

CATASTROPHIC BRAIN INJURY

Edited by Harvey S. Levin, Arthur L. Benton, J. Paul Muizelaar, and Howard M. Eisenberg

"This book is very well-written, timely, and important for healthcare professionals who treat patients who have sustained severe traumatic brain injury and other forms of acquired brain injury.... It is a must for libraries in healthcare facilities and individual practices. Rating: *****"

—*Doody's Journal*

1996 282 pp.; 12 illus. \$39.95

FRACTURED MINDS

A Case-Study Approach to Clinical Neuropsychology
Jenni A. Ogden

This book introduces clinical neuropsychology through vivid case descriptions that convey the human dimensions of brain disease and injury. Each chapter covers background theory and neuropathology before presenting a detailed case study.

June 1996 368 pp.; 27 illus. paper \$26.95/ cloth \$50.00

BRAIN DEVELOPMENT AND EPILEPSY

Edited by Philip A. Schwartzkroin, Solomon L. Moshé, Jeffrey L. Noebels, and John W. Swann

"This book is not the last word in an embryonic discipline, but it is an excellent opening statement that summarizes the state-of-the-art in 1996 and sets the scene for what is to come in the near future.... We strongly recommend this monograph to clinical neurologists, neurosurgeons, neuropathologists, and other physicians who deal with epileptic children and who wish to incorporate developmental neuroscience into a clinically relevant context."

—*Neurology*

1995 352 pp.; 55 illus. \$59.95

BRAIN REPAIR

Donald G. Stein, Simón Brailowsky, and Bruno Will
Translated by Bradley Postle

"Justifiable optimism is the theme of this carefully thought-out, clearly written book. Stein and his colleagues survey the growth of knowledge about the brain, its injuries and diseases; examine current approaches to the repair of those traumas and the rehabilitation and retraining of their sufferers; and discuss procedures of examination and diagnosis.... Professional and lay readers alike should ponder this pioneering book."

JOURNAL OF THE INTERNATIONAL NEUROPSYCHOLOGICAL SOCIETY

Instructions for Contributors

Aims and Scope

The *Journal of the International Neuropsychological Society* welcomes scholarly contributions broadly reflecting the interests of all areas of neuropsychology. Coverage will include, but is not limited to, topics in adult neuropsychology, child neuropsychology, developmental neuropsychology, disorders of speech and language, and the interfaces of neuropsychology with related areas such as behavioral neurology, neuropsychiatry, neuroimaging and electrophysiology. *Book Reviews* will also be published.

Neuropsychological topics include theoretical considerations such as the development of cognitive processes, and brain-behavior relationships. Submissions are also encouraged that employ neuropsychological methods as either independent or outcome variables to illuminate the processes of various neurological, medical, and psychiatric disorders. The focus of the work may be primarily experimental, more applied or clinical. The key requirements are that it be original, creative, and of high quality.

To assure maximum flexibility and to promote diverse mechanisms of scholarly communication, it is intended to offer at least the following formats in addition to regular research articles: *Rapid Communications* which should be brief and are intended for "fast-breaking" new work which does not yet justify a full length article; *Case Studies* that report interesting individual cases; *Critical Reviews* which should be thoughtful considerations of topics of importance to neuropsychologists; *Updates* intended to provide an educational exposition of cognate fields, e.g., functional brain imaging, neuroepidemiology, ethical issues, etc; *Symposia* consisting of several research articles on a thematically linked area; *Dialogues* publishing arguments in a point-counterpoint form with two or more authors taking different positions on controversial issues in neuropsychology; and *Letters to the Editor* which should briefly report on observations or respond to recent articles in the *Journal of the International Neuropsychological Society*.

Critical Reviews, Updates, Symposia and Dialogues may be invited by the Department Editor responsible, or may be proposed by authors. Such proposals should be discussed with the Editor-in-Chief or the appropriate Department Editor before submission.

Originality and Copyright

To be considered for publication in the *Journal of the International Neuropsychological Society*, a manuscript cannot have been published previously, nor can it be under review for publication elsewhere. Papers with multiple authors are reviewed with the assumption that all authors have approved the submitted manuscript and concur with its submission to the *Journal of the International Neuropsychological Society*. A Copyright Transfer Agreement, with certain specified rights reserved by the author, must be signed and returned to the Editor by senior authors of accepted manuscripts, prior to publication. This is necessary for the wide distribution of research findings, and the protection of both author and the society under copyright law.

Manuscript Submission and Review

An original and four complete copies including figures and illustrations should be sent to:

Igor Grant, MD
Editor-in-Chief
Journal of the International Neuropsychological Society
Department of Psychiatry
Clinical Sciences Building, Room 249
University of California, San Diego
9500 Gilman Drive
La Jolla, CA 92093-0680

Phone: (619) 534-4306
Fax: (619) 552-4318
E-mail: jins@ucsd.edu

In a cover letter, the author should indicate the category under which a manuscript is submitted and should identify the corresponding author including phone number, fax number and electronic mail address (if available).

The Editor-in-Chief will acknowledge receipt of the manuscript, provide it with a manuscript reference number, and assign it for review to an Associate or Department Editor and at least two other reviewers. Every effort will be made to provide the author with a review within 10 weeks of manuscript assignment. *Rapid Communications* and *Letters to the Editor* will be reviewed within 6 weeks. If the Editor requests that revisions be made to a manuscript before publication, a maximum of 4 months will be allowed for preparation of the revision, except in unusual circumstances.

Manuscript Length

Regular Research Articles—maximum of 5,000 words and a 200 word abstract (approximately 20 double-spaced manuscript pages, not including references and tables) but exceptions will be considered for unusually large or complex studies. *Rapid Communications*—maximum 2,500 words and a 150 word abstract, approximately 10 double-spaced manuscript pages, with a maximum of two tables and/or two figures. *Rapid Communications* should list no more than 20 references. *Case Studies*—for interesting cases, maximum 2,500 words with an informative literature review and an abstract not exceeding 150 words. *Letters to the Editor*—maximum 500 words with up to five references, one table or one figure.

Manuscript Preparation and Style

The entire manuscript should be typed double-spaced throughout on 8-1/2" x 11" or A4 paper. Unless otherwise specified, the guideline for preparation of manuscripts is the *Publication Manual of the American Psychological Association* (4th edition). This may be ordered from: APA Order Dept., 750 1st St. NE, Washington DC 20002-4242, USA.

Pages should be numbered sequentially beginning with the Title Page. The Title Page should contain the full title of the manuscript, the full names and affiliations of all authors, a contact address with telephone and fax numbers, acknowledgments and support, and the name and address for requests for reprints. At the top right provide also a running headline (shortened title) of up to forty-five characters preceded by the lead author's last name. Example: Smith-Implicit Memory in Parkinson's. This running headline should be repeated at the top right of every following page.

The Abstract and Keywords Page (page 2) should include a brief statement of the problem, the method, the key findings, and the conclusions. For *Case Studies* there should be a brief summary of the case and its relevance to the existing literature. A list of three or four key words or terms should also be included.

The full text of the manuscript should begin on page 3. For scientific articles, including regular *Research Articles* and *Rapid Communications*, the format would include an Introduction, Method, Results, and Discussion. This should be followed by References, Tables, Figures, and Figure Legends printed on a separate sheet.

The use of abbreviations, except those that are widely used, is strongly discouraged. They should be used only if they contribute to better comprehension of the manuscript. Acronyms should be spelled out at first mention. Metric system (SI) units should be used.

Figures

High quality laser-printed copies or photocopies are acceptable. Figures should be numbered consecutively as they appear in the text. Mark each figure with the first author's name, the figure number and the orientation on the reverse of the originals and copies. Any indication of features of special interest should also be included. Figures should be drawn or composed on computer to about twice their intended final size and authors should do their best

to construct figures with notation and data points of sufficient size to permit legible photoreduction to one column of a two-column format. As a guide, no character should be smaller than 1 mm wide following reduction.

Color figures can be accepted. However, the extra costs of printing these figures must be paid by the author.

References

References should be in American Psychological Association style (see *Manuscript Preparation and Style* above).

Text references should be cited as follows: "The findings duplicated the results of an earlier study (Brown & Greene 1991)," or "The method used was an enhancement of Bell and Tower's (1973) and Jones et al.'s (1977). . . ." If multiple works by Jones et al. (1977) are cited, use a, b, c, in the order these appear in the text. Multiple references should be cited alphabetically: "Previous studies (Adams et al., 1980; Davies and Engler, 1985; Watson, 1987). . . ." References cited in the text with three or more authors should state et al. even at first mention. Reference entries should be alphabetically listed in the reference section with all authors being cited. Examples of the APA reference style are as follows:

Scientific Article:

Heaton, R.K., Grant, I., Anthony, W.Z., & Lehman, R.A.W. (1981). A comparison of clinical and automated interpretation of the Halstead-Reitan Battery. *Journal of Clinical Neuropsychology*, 3, 121-141.

Book:

Russel, E.W., Neuringer, C., & Goldstein, G. (1970). *Assessment of brain damage: A neuropsychological key approach*. New York: Wiley.

Chapter in Book:

Reitan, R.M. (1966). A research program on the psychological effects of brain lesions in human beings. In N.R. Ellis (Ed.), *International Review of Research in Mental Retardation, Vol. 1* (pp. 153-218). New York: Academic Press.

Report at a Scientific Meeting:

Berman, K.F., Zec, R.F. & Weinberger, D.R. (1989, May). *Frontal cortical dysfunction in schizophrenia*. Symposia presentation, American Psychiatric Association, Washington, DC.

Manual, Diagnostic Scheme, etc.:

American Psychiatric Association (1994). *Diagnostic and Statistical Manual of Mental Disorders* (4th ed.). Washington, DC: American Psychiatric Association Press.

Manuscript Disk

When a manuscript has been accepted for publication, the authors are requested to submit a disk version of their manuscript along with two hard copies. The disk should be labeled with the manuscript number, the author's name and the original word-processing file. It should be noted that the disk file will be considered the final version of the manuscript.

Proofs

The publisher reserves the right to copyedit manuscripts. The corresponding author will receive page proofs for final proofreading. These should be checked and returned within 2 days of receipt. The publisher reserves the right to charge authors for excessive correction of nontypographical errors.

Offprints

The corresponding author will receive 25 free offprints. Additional offprints must be ordered when page proofs are returned. Price lists and order forms will be sent with page proofs.

Journal of the International Neuropsychological Society

Volume 2

Number 3

May 1996

- i Contents Listing:
Paper Session, Symposium, and Poster Session Titles
- iii Members of the 1996 INS Program Committee
Continuing Education Program
- 183 Abstracts Presented at the Nineteenth Annual International Neuropsychological Society,
Mid-Year Conference, June 19-22, 1996, Veldhoven, The Netherlands
- 209 Author Index for the Abstracts Presented at the Nineteenth Annual INS Mid-Year Conference,
June 19-22, 1996, Veldhoven, The Netherlands
- Second Pacific Rim Conference of the International Neuropsychological Society, and the Australian Society for
the Study of Brain Impairment
- 213 Minutes from the INS Board of Governors Meeting
- 215 Minutes from the Annual Business Meeting

ARTICLES AND DEPARTMENTS SECTION

RESEARCH ARTICLES

- 219 Subjective Complaints of Cognitive Symptoms Are Related to Psychometric Findings of Memory Deficits in Patients with HIV-1 Infection *E. Poutiainen and I. Elovaara*
- 226 Freehand Drawing Impairments in Probable Alzheimer's Disease *M. Grossman, J. Mickanin, K. Onishi, K.M. Robinson, and M. D'Esposito*
- 236 Effect of Asymptomatic Carotid Artery Disease on Cognitive Outcome after Cardiopulmonary Bypass *G. Vingerhoets, G. Van Nooten, and C. Jannes*
- 240 Representations in Learning New Faces: Evidence from Prosopagnosia *M.R. Polster and S.Z. Rapcsak*
- 249 Mood and Global-Local Visual Processing *M.R. Basso, B.K. Schefft, M.D. Ris, and W.N. Dember*

CASE STUDY

- 256 Near Drowning in Frigid Water: A Case Study of a 31-Year-Old Woman *H.C.G. Huckabee, P.L. Craig, and J.M. Williams*

BOOK REVIEWS

- 261 Review of: *The Neurology of Thinking*, by Frank Benson *C.-W. Wallesch*
- 262 Review of: *Memory Systems 1994*, Daniel L. Schacter and Endel Tulving (eds.), and *Memory in the Cerebral Cortex: An Empirical Approach to Neural Networks in the Human and Nonhuman Primate*, by Joaquin M. Fuster *D.B. Howieson*
