|                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------|-----|
| BAER R.: Finitely valued commutator sequences . . . . .                                                                       | 35  |
| BIRMAN J. S.: Poincaré's conjecture and the homeotopy group of a closed, orientable<br>2-manifold . . . . .                   | 214 |
| BLOOM L. M. The Fourier multiplier problem for spaces of continuous functions with<br><i>P</i> -summable transforms . . . . . | 319 |
| BLOOM W. R.: Bernstein's inequality for locally compact abelian groups . . . . .                                              | 88  |
| BRYCE R. A.: Metanilpotent fitting classes . . . . .                                                                          | 285 |
| BUCHWALD V. T.: Kelvin-wave diffraction by a gap . . . . .                                                                    | 29  |
| CHAU T. C.: The laws of some nilpotent groups of small rank . . . . .                                                         | 129 |
| COHEN D. E.: Subgroups of <i>HNN</i> groups . . . . .                                                                         | 394 |
| COSSEY J.: <i>See</i> R. A. BRYCE . . . . .                                                                                   | 285 |
| DYSON V. H.: A family of groups with nice word problems . . . . .                                                             | 414 |
| EVANS T.: Some finitely based varieties of rings . . . . .                                                                    | 246 |
| GRATZER G.: Free products of hopfian lattices . . . . .                                                                       | 234 |
| GREEN J. A.: Walking around the Brauer tree . . . . .                                                                         | 197 |
| GUPTA N.: Generating groups of certain soluble varieties . . . . .                                                            | 222 |
| HALL P.: On the embedding of a group in a join of given groups . . . . .                                                      | 434 |
| HEINEKEN H.: Locally soluble groups with min- <i>n</i> . . . . .                                                              | 305 |
| HILTON P.: Two remarks on the homology of group extensions . . . . .                                                          | 343 |
| HOUGHTON C. H.: Ends of locally compact groups and their coset spaces . . . . .                                               | 274 |
| HULSE J. A.: Local systems in groups . . . . .                                                                                | 426 |
| IVANOV G.: Nonsingular rings with essential socles . . . . .                                                                  | 358 |
| JONES G. A.: Varieties and simple groups . . . . .                                                                            | 163 |
| JONES J. M. T.: Direct products and the Hopf property . . . . .                                                               | 174 |
| KOVÁCS L. G.: Inaccessible varieties of groups . . . . .                                                                      | 506 |
| LAIRD P. G.: Ideals in a ring of exponential polynomials . . . . .                                                            | 257 |
| LEONG Y. K.: Odd order nilpotent groups of class two with cyclic centre . . . . .                                             | 142 |
| LEVIN F.: <i>See</i> N. GUPTA . . . . .                                                                                       | 222 |
| LOY R. L.: Banach algebras of power series . . . . .                                                                          | 263 |
| MCCAUGHAN D. J.: Subnormality in soluble minimax groups . . . . .                                                             | 113 |
| MACDONALD I. D.: A computer application to finite <i>p</i> -groups . . . . .                                                  | 102 |
| MAKAN A. R.: On a relation between injectors and certain complemented chief factors of<br>finite soluble groups . . . . .     | 385 |
| MILES J. W.: <i>See</i> V. T. BUCHWALD . . . . .                                                                              | 29  |
| NEUMANN W. D.: On Malcev conditions . . . . .                                                                                 | 376 |
| NEWMAN M. F.: HANNA NEUMANN . . . . .                                                                                         | 1   |
| O'BRIEN G. C.: The frequencies of almost periodic solutions of almost periodic<br>differential equations . . . . .            | 332 |
| SCHMIDT J.: Each join-completion of a partially ordered set is the solution of a<br>universal problem . . . . .               | 406 |
| SICHLER J.: <i>See</i> G. GRATZER . . . . .                                                                                   | 234 |
| SMYTH C. J.: Inequalities relating different definitions of discrepancy . . . . .                                             | 81  |
| SOUTHCOTT B.: A basis for the laws of a class of simple groups . . . . .                                                      | 500 |

|                                                                              |     |
