**Combinatorics: Topics, Techniques, Algorithms**

PETER J. CAMERON

A textbook in combinatorics for second-year undergraduate to beginning graduate students. It stresses common techniques (such as generating functions and recursive construction) which underlie the great variety of subject matter, and the fact that a constructive or algorithmic proof is more valuable than an existence proof.

£35.00 net Hardback 0 521 45133 7 368 pp.

£14.95 net Paperback 0 521 45761 0

**Surveys in Combinatorics, 1993**

Edited by K. WALKER

This volume comprises the invited lectures given at the 14th British Combinatorial Conference. The lectures survey many topical areas of current research activity in combinatorics and its applications, and also provide a valuable overview of the subject, for both mathematicians and computer scientists.

£22.95 net Paperback 0 521 44857 3 295 pp.

*London Mathematical Society Lecture Note Series 187*

**Complexity: Knots, Colourings and Counting**

DOMINIC WELSH

These notes are based on a series of lectures given at the Advanced Research Institute of Discrete Applied Mathematics in June 1991. Their aim is to link together algorithmic problems arising in knot theory, statistical physics and classical combinatorics. To researchers in discrete mathematics, computer science, and statistical physics, this book will be of great interest.

£19.95 net Paperback 0 521 45740 8 171 pp.

*London Mathematical Society Lecture Note Series 186*

**Efficient Algorithms for Listing Combinatorial Structures**

LESLIE ANN GOLDBERG

This thesis, winner of a distinguished dissertation award, is concerned with the design of efficient algorithms for listing combinatorial structures. The research described here will be of interest to combinatorialists and theoretical computer scientists.

£27.95 net HB 0 521 45021 7 176 pp.

*Distinguished Dissertations in Computer Science 5*

**Information Dispersal and Parallel Computation**

Y-D. LYUU

In 1989, Michael Rabin proposed a fundamentally new approach to the problems of fault-tolerant routing and memory management in parallel computation, based on the idea of information dispersal. Yuh-Dauh Lyuu develops this idea in a number of new and exciting ways in this extended and updated printing of his PhD thesis.

£22.95 net Hardback 0 521 43226 X 240 pp.

*Cambridge International Series on Parallel Computation 4*
