Cover

Distaff thistle (*Carthamus lanatus* L.) has showy yellow flowers. The attractive head belies the weediness of this winter annual plant. Dense stands can exclude livestock all year because the stems and leaves remain rigid through the winter after they mature. Distaff thistle has been found in the eastern U.S. and in localized areas of California and Oregon. This photograph was entered in the slide division of the 1993 WSSA Photography Contest, Denver, CO, and was submitted by Larry C. Burrill, Department of Crop and Soil Science, Oregon State University, Corvallis, OR 97331-3002.
