

New and Noteworthy from Cambridge

Announcing two new series...

Cambridge Studies in Contentious Politics

Breaks apart the narrow disciplinary and subfield boundaries that have fragmented the study of both traditional social movements as well as their non-routine politics. By exploring non-institutionalized political actions, including revolutions, democratization, cycles of protest, and ethnic conflicts, the connections between a wide array of political and social phenomena are examined in national, comparative, and global perspectives.

The Global Divergence of Democracies

edited by Larry Diamond
and Marc F. Plattner

The tremendous momentum of democratic expansion that characterized the 1980s and the first half of the 1990s has drawn to a halt. Significantly, this halt has not yet been followed by a "reverse wave" of democratic breakdowns, and democracy remains unchallenged as a global model and ideal of governance. The values of freedom, human rights, and popular sovereignty have continued to gain strength in the world.

Nonetheless, in practice, the performance of the world's newer democracies has become increasingly varied. With contributions by the world's leading scholars of democracy, this volume presents the most comprehensive assessment available of the state of democracy in the world at the beginning of the new millennium.

Luciak discusses the democratization of guerrilla movements; the sex/gender distinction and its relevance to women's agendas in the region; the conflict between the neoliberal policies and democratization; the focus of the consolidation literature on political parties and party systems; and the difficulties of internal democratization for these parties."—Jane Jaquette, Occidental College

CONSTITUTING FEDERAL SOVEREIGNTY

The European Union in Comparative Context

LESLIE FRIEDMAN GOLDSTEIN

"This book is a substantial contribution to the field. Seeking to understand how federal states succeed in holding themselves together, Professor Goldstein contrasts the experience of the early American union, dominated by fractious and sometimes violent jurisdictional disputes, with the more placid post-World War Two experience of the European Union. It is here that her work really shines. Her method of comparing modern federal structures is sound and her scholarship is very thorough."—Stephen M. Griffin,
Tulane Law School

Starting from the premise that the system of independent, sovereign, territorial states, which was the subject of political science and international relations studies in the twentieth century, has entered a transition toward something new, noted political scientist Leslie F. Goldstein examines the development of the European Union by blending comparative and historical institutionalist approaches. She argues that the most useful framework for understanding the kinds of "supra-state" formations that are increasingly apparent in the beginning of the third millennium is comparative analysis of the formative epochs of federations of the past that formed voluntarily from previously independent states.

Goldstein identifies three significant predecessors to today's European Union: the Dutch Union of the 17th century, the United States of America from the 1787 Constitution to the Civil War, and the first half-century of the modern Swiss federation, beginning in 1848. She examines the processes by which federalization took place, what made for its success, and what contributed to its problems.
