

Effect of Mechanical Activation on the Heat of Fusion of a Conventional Batch Used for the Manufacture of Float Glass- CORRIGENDUM

J. López-Cuevas, G. Vargas-Gutiérrez, P.P. Rodríguez-Salazar and S.R. Ruiz-Ontiveros

<https://doi.org/10.1557/adv.2019.442>

The authors on this article [1] would like to make the following addition to the Acknowledgment section:

The authors wish to thank Dr. Fernández-Fuentes for the use of his planetary ball mill, and for the advice, guidance and supervision given by him to the student Perla Patricia Rodríguez-Salazar to carry out the mechanical activation of the studied materials. The work reported in the article is derived from the master's thesis produced by Perla Patricia Rodríguez-Salazar under the supervision of Dr. Gregorio Vargas-Gutiérrez and Dr. Jorge López-Cuevas at Cinvestav-Saltillo.
