

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using \LaTeX . Authors who are able to do so are invited to prepare their manuscripts using \TeX . (We accept Plain \TeX , \LaTeX or \LaTeX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Closed linear maps from a barrelled normed space into itself need not be continuous José Bonet	177
Isomorphisms of Cayley digraphs of Abelian groups Cai Heng Li	181
On a diophantine equation Fadwa S. Abu Muriefah and S. Akhtar Arif	189
On the size of integer solutions of elliptic equations Yann Bugeaud	199
Functional means and harmonic functional means Soon-Yeong Chung	207
A closed simplicial model category for proper homotopy and shape theories J.M. García-Calines, M. García-Pinillos and L.J. Hernández-Paricio	221
Permutation polynomials with exponents in an arithmetic progression Young Ho Park and June Bok Lee	243
Sharp gradient estimates for eigenfunctions on Riemannian manifolds Albert Borbély	253
Class numbers of real quadratic fields Jae Moon Kim	261
Convergence of a quadrature formula for variable-signed weight functions H.S. Jung and K.H. Kwon	275
An isodiametric problem with lattice-point constraints M.A. Hernández Cifre and P.R. Scott	289
Spherical submanifolds with special quadric representations Jitan Lu	295
The exponential stability of the problem of transmission of the wave equation Weijiu Liu and Graham Williams	305
The Weyl calculus and Clifford analysis Brian Jefferies and Alan McIntosh	329
On a question of Gross concerning uniqueness of entire functions Huong-Xun Yi	343
ABSTRACTS OF AUSTRALASIAN Ph.D. THESES	
Several classes of single variable polynomials over finite fields Marie Henderson	351
