
The Genetics of Locomotor Disorders

C. O. Carter and T. J. Fairbank

The authors of this book have two objectives in view: first to provide a useful source of information to doctors, and orthopaedic surgeons in particular, whose work requires some knowledge of the genetic factors affecting locomotor diseases, and secondly to offer a reference source to those working in genetics itself. For each disorder a clinical definition and description is given, followed by the genetic aspects and a full list of references. £5 *Oxford Monographs on Medical Genetics*

The Distribution of the Human Blood Groups

and other Biochemical Polymorphisms

A. E. Mourant, Ada C. Kopéc, and Kazimiera Domaniewska-Sobczak

The first edition of this book was published in 1954 when only ten major genetically independent systems of blood groups had been discovered. Now completely rewritten and expanded to include a mass of new information, this second edition is a unique compendium of the basic quantitative data on human population genetics. As such it will be needed by every research worker in physical anthropology and in human genetics. Second edition £35 *Oxford Monographs on Medical Genetics*

The Biology of Tribolium with Special Emphasis on Genetic Aspects

Volume II

A. Sokoloff

Flour beetles of the genus *Tribolium* are primary pests of stored products. Because of their economic importance, and the ease of handling in the laboratory, they are widely used by entomologists, population ecologists, and geneticists. This volume brings together widely scattered information on *Tribolium* ecology. It also has a chapter on physiological and biochemical studies, as well as one on mathematical models relating to population ecology. Illustrated £19.50

Our Future Inheritance

Choice or Chance?

Alun Jones and Walter F. Bodmer

Recent advances in genetics, biology, and medicine have important social, ethical, and legal implications as well as being of great scientific interest. This book is concerned with some of the most significant topics: artificial insemination and fertilization of humans; genetic screening and selective abortion; organ transplantation; genetic engineering and cloning. £4 paper covers £1.25

Oxford University Press

Pure Lectins

Cell surface studies

Lymphocyte stimulation

Chromosome analysis

Leucoagglutinin

Unlike crude preparations of PHA, Leucoagglutinin is an electrophoretically pure glycoprotein with potent lymphocyte stimulating activity but no erythroagglutinating activity.

ConA

Prepared by affinity chromatography on Sephadex. Fully active and no further purification is required. Freeze-dried powder containing at least 99 % protein and less than 0.1 % carbohydrate.
